

Entangled System Profile

Assignment 1 · Making with Machines

Purpose. Explore the AI system involved in making your artwork or artifact through three Entangled Dimensions of AI Literacy. This is an exploratory profile, not a technical audit or research paper.

How to use this form

- Scan all ten dimensions below.
- Investigate Ecological + two dimensions of your choice.
- For each selected dimension, record where you looked, what you found/observed/conjectured, what remains unclear, and one ethical question or tension.
- You are not expected to uncover information that is unavailable. Opacity is a finding.

A note on conjecture

Much about contemporary AI systems is difficult or impossible to inspect directly. You may not be able to determine exactly why a system produced something, what material was present in its training data, or what happened inside the model. That uncertainty is part of the inquiry.

FOUND

Information you located in a source, such as a platform website, model card, policy, course reading, article, or report.

OBSERVED

Something you noticed through your own prompts, outputs, comparisons, interface use, or experiments with the system.

CONJECTURED

A plausible interpretation or speculation about how the system may be operating that you cannot confirm.

Conjecture is welcome. Just name it as conjecture.

Where can you look?

You might use: the platform website, a model/system card, terms or policies, a course reading, an article or report, **your own experiments with the system; speculative conjectures based on what you know about the system.**

You do not need the same kind of information for every dimension. The point is to look carefully and make your level of certainty visible.

The ten dimensions

Explore the full framework online: [Entangled Dimensions of AI Literacy](#)

Dimension	Questions for your artwork or artifact	Ethical question
Data	What is known or suspected about the data that shaped what the system could generate? What kinds of cultural material, labels, genres, or representations may be present?	Whose material became data, under what conditions, and who benefits from its use?

Dimension	Questions for your artwork or artifact	Ethical question
Algorithmic	What did the system automate, select, filter, rank, refuse, or add without being explicitly asked? What patterns do you notice when you vary or repeat prompts?	Which decisions are being delegated to the system, and who is responsible for their consequences?
Ecological	What material resources may have supported your making: computation, energy, water, hardware, minerals, manufacturing, emissions, or waste? What can you actually know about the system you used?	What environmental costs are made difficult to see by the speed and apparent immateriality of generation, and who bears them?
Futures	What future of education, creativity, work, or human-AI relations does your artifact assume, invite, normalize, or resist?	Whose desired future is being imagined or built, and whose futures may become harder to imagine?
Creative	What did the system contribute? What did you select, reject, alter, combine, or make yourself? What styles, conventions, or creative histories appear in the output?	How should authorship, attribution, consent, and creative responsibility be understood here?
Relational	How did the system change your relation to the work, to other makers, to audiences, or to people and institutions that helped make the system possible?	What relationships does the system strengthen, weaken, replace, hide, or make newly possible?
Political	Who owns and governs the system? What platform rules, policies, commercial interests, institutional conditions, or forms of power shaped what you could make?	Who gets to set the rules, and whose interests are protected or marginalized by them?
Disciplinary	How is this kind of AI use understood in education or in the field/practice your artifact draws upon? What norms, expertise, or professional practices does it challenge?	What forms of expertise or practice might be expanded, transformed, devalued, or excluded?
Epistemic	What does the system appear to treat as plausible, credible, normal, or authoritative? What did you have to judge, check, or decide for yourself?	Who gets to define what counts as knowledge, evidence, expertise, or truth in this encounter?
Knowledge-construction	How did prompting, searching, generating, categorizing, or synthesizing with AI shape what you came to notice or understand while making?	What intellectual work did the system perform, what remained yours, and what might be lost or changed when parts of knowing are automated?

ECOLOGICAL — required

Guiding questions: What material resources may have supported your making: computation, energy, water, hardware, minerals, manufacturing, emissions, or waste? What can you actually know about the system you used?

Ethical lens: What environmental costs are made difficult to see by the speed and apparent immateriality of generation, and who bears them?

Where did you look?

Examples: platform/model information, policies, course reading, article/report, your own experiments, or conjecture.

What did you find, observe, or conjecture? Label each as FOUND, OBSERVED, or CONJECTURED.

What remains unclear, unavailable, or uncertain?

What ethical question, tension, responsibility, harm, or possibility does this raise?

Why does this matter for how you understand your artwork or artifact?

SELECTED DIMENSION 2

Dimension: _____

Use the guiding questions and ethical question from the ten-dimension table above.

Where did you look?

Examples: platform/model information, policies, course reading, article/report, your own experiments, or conjecture.

What did you find, observe, or conjecture? Label each as FOUND, OBSERVED, or CONJECTURED.

What remains unclear, unavailable, or uncertain?

What ethical question, tension, responsibility, harm, or possibility does this raise?

Why does this matter for how you understand your artwork or artifact?

SELECTED DIMENSION 3

Dimension: _____

Use the guiding questions and ethical question from the ten-dimension table above.

Where did you look?

Examples: platform/model information, policies, course reading, article/report, your own experiments, or conjecture.

What did you find, observe, or conjecture? Label each as FOUND, OBSERVED, or CONJECTURED.

What remains unclear, unavailable, or uncertain?

What ethical question, tension, responsibility, harm, or possibility does this raise?

Why does this matter for how you understand your artwork or artifact?

Things I consulted

List or link any sources, documentation, readings, articles, reports, or other material you used. Formal APA formatting is welcome but not required for this worksheet unless specified by your instructor.
